OBJECTIVE

Backend Engineering Intern candidate (B.Tech CSE, 2027) with strong foundations in Java, backend service development, and REST API design. Experienced in building scalable web applications, designing efficient data models using MySQL and MongoDB, and optimizing queries for performance. Seeking a Backend Engineering Intern role at Sense to contribute to API development, microservices, Redis caching, and AWS-based systems.

ACHIEVEMENTS

- N.T.S.E. 2020 Scholar (National Level Award)
- INSPIRE 2022 Scholar (National Level Award)

EDUCATION

B. Tech Computer Science, Cochin University of Science and Technology Expected 2027

CGPA: 8.9575 / 10.0

Relevant Coursework: DSA, Operating Systems, Computer Networks, SQL & Relational Databases (DBMS), Object Oriented Programming, Software Engineering, Computer Architecture, Python for ML, Discrete Mathematics

SKILLS

Programming Languages	Java, Python, C, C++
Backend Development	REST APIs, Node.js, Express.js, MVC Architecture, Microservices Basics
Databases & Caching	MySQL (Joins, Indexing, Query Optimization), MongoDB (Schema Design), Redis (B
Cloud & Infrastructure	AWS Basics (EC2, S3, RDS, IAM), Deployment, Environment Configuration
Performance & Reliability	Debugging, Logging, Error Handling, API Integration, Latency Optimization
Core CS Concepts	OOP, Data Structures & Algorithms, DBMS, OS, Computer Networks
Tools & Practices	Git/GitHub, Agile, Code Reviews, Documentation

EXPERIENCE

Web Development Intern June 2025 – July 2025

VaultofCodes

- Built and maintained backend REST APIs using Node.js and Express.js to support core product workflows.
- Designed database schemas and optimized SQL queries (joins, indexing) for reliable and faster responses.
- Implemented validation, structured error handling, and logging to improve backend stability.
- Debugged functional issues and delivered production-ready features using Git-based collaboration.

AI Intern

Sep 2025 – Nov 2025

Infosys

- Built an AI-based plant disease diagnosis system using Python and CNN models for image classification.
- Developed preprocessing and augmentation pipelines to improve generalization on real-world samples.
- Evaluated performance using accuracy and structured metrics, and documented results for improvements.

PROJECTS

YelpCamp – Cloud Ready Full Stack Application ([Live Demo](#))

- Developed scalable backend services using Node.js, Express.js, and MongoDB with clean MVC architecture.
- Designed RESTful APIs for campgrounds, reviews, and users with secure authentication and authorization.
- Optimized MongoDB queries and data models to improve performance and reduce API latency.
- Deployed cloud-ready application and debugged runtime issues using logs and structured error handling.
